Good team player

EXPERIENCE

SUNY College of Technology at Alfred State

2013–2016

Information Technology Tutor

Tutored all levels of programming classes with topics ranging from beginner concepts to more advanced object oriented programming topics.

Advance 2000

Summer 2015

Software Development Intern

Performed front end web development in AngularJS 1.0; both creating new services and migrating existing ASP.NET to AngularJS.

PROJECTS

Pin{IT}erest

This was a simple CRUD/image board project written in PHP and using Laravel. I served mainly in a sysadmin role by managing things such as the server, git repository, and issue tracking.

Literate Fibonacci

This was a program I wrote for a presentation on literate programming I gave to my class. The program itself is simple, but it showcases the different uses and benefits of literate programming.

noracook.io

This site is both my personal website and I use it quite frequently as a server for various web projects and any databases. Managing this server has become a regular task for me and I am constantly making changes or attempting to improve it somehow.
